

AAKASH YADAV

+91 9170959652 | akasyadav483@gmail.com | Bhadohi, UP

CAREER SUMMARY

Experienced professional with a strong foundation in Power BI, Snowflake, SQL, Python and Excel leveraging data visualization and analytics to drive business strategies. Skilled in collaborating with stakeholders to gather requirements, translate business objectives into actionable insights, and design user-focused dashboards and solutions. Passionate about identifying opportunities for process improvement and delivering data-driven recommendations to support organizational growth. Seeking opportunities to bridge business and technical teams in a dynamic environment.

PROFESSIONAL EXPERIENCE

DATA ANALYST | ANALYTICSWITHANAND | Bangalore, Karnataka

Mar 2025 – Present

- **Connected and integrated multiple data sources** in Power BI including **Snowflake, MySQL, CSV files, and Excel spreadsheets** to build unified and dynamic reporting models.
- **Implemented Incremental Data Refresh** in Power BI using **Parameters**, significantly improving data load performance and scalability for large Snowflake datasets.
- Used **Power BI Service** for report publishing, scheduled refresh, and workspace management.
- Created **custom visuals and bookmarks** to enhance report interactivity and user experience.
- Implemented **Row-Level Security (RLS), Object-Level Security (OLS), and Page-Level Security** in datasets to ensure robust data access control and enhanced report security.
- Created paginated reports using **Power BI Report Builder** to generate highly formatted, print-ready reports for operational and regulatory reporting needs.

DATA ANALYST | Faith E-Commerce Services | Sonipat, HR

Sep 2022 – Feb 2025

- Designed and deployed **interactive Power BI dashboards** to track and analyze sales, inventory, and returns across **Amazon, eBay, and a WooCommerce store**.
- Utilized **Power Query** and **DAX** to clean, transform, and model data from disparate sources including **CSV exports, APIs, and spreadsheets**.
- Created dynamic **KPIs and visualizations** to monitor platform-wise sales trends, product performance, and customer behavior.
- Applied **automated data refresh** and **alert systems** for real-time visibility into stock levels, order status, and profit margins.
- Built drill-through reports and slicers to enable **customizable insights by product category, marketplace, and time period**.
- Integrated **advertising and marketing data** to analyze ROI, ACoS, and optimize campaign spending.
- Collaborated directly with the client to align dashboards with business goals, supporting data-driven decisions and **sales strategy improvements**.

EDUCATION

M.SC | Data Science | Chandigarh University

2024 – Present

B.SC | Maharishi Dayanand University

2017 – 2020

TECHNICAL SKILLS

- **Business Intelligence Tools:** Power BI, Microsoft Excel, IBM Cognos
- **Database Management:** MySQL Workbench
- **Data Warehouse:** Snowflake Cloud
- **ETL Tools:** Alteryx Designer, AWS Glue, Matillion
- **Data Lake:** AWS S3
- **Automation Tool:** Power Automate
- **Languages:** Python, SQL

PROJECTS

End to End Python Data Engineering Project

- Designed and executed an automated ETL pipeline on AWS to extract insurance data from a public web API, transform it using AWS Lambda, and store structured data in S3 buckets.
- Utilized AWS EventBridge to schedule data extraction tasks and set up S3 triggers to automate transformation workflows.
- Parsed and categorized raw data into normalized datasets (e.g., policy, claim, and customer records) and stored them in designated folders within S3.
- Built Glue Crawlers and Athena queries on top of the transformed datasets for schema discovery and interactive analysis through AWS Glue Data Catalog.

End to End Alteryx Email Marketing Analytics Project

- Built a data quality assurance (QA) pipeline to validate email campaign data against master records using MD5 hash matching, deduplication, and chronological date checks.
- Logged all failed records with detailed reasons in a separate audit file to support traceability and improve data reliability.
- Identified converters by matching cleaned campaign data with customer data at both email MD5 and postal levels within a 30-day conversion window.
- Generated actionable insights, including top 10 customers by order volume, and structured all outputs as per stakeholder-specified CSV formats.

Salesforce to Matillion DPC Integration

- Integrated Salesforce with Matillion Data Productivity Cloud (DPC) to automate secure and scalable data ingestion pipelines.
- Configured Salesforce connectors in Matillion DPC to extract data from standard and custom objects with support for incremental loading.
- Designed and orchestrated end-to-end data pipelines within Matillion DPC, enabling efficient transformation and loading into cloud data warehouses i.e. Snowflake.
- Applied data quality checks and transformation logic using Python and SQL scripts within DPC pipelines to ensure clean and analytics-ready data.
